

Phase-Out of T- and F-Series Compressors

Replacement Solution: FRK Compressors

After more than 50 years of the successful introduction to the market, Secop would like to announce that the T- and F-Series compressors are scheduled to be discontinued in 2025.

In the past several years the global regulatory environment has significantly raised the bar on efficiency and is driving the introduction of new greener refrigerants. This has brought on a reduction in the consumption of these older compressor families. Secop has therefore optimized the product portfolio with new updated compressor platforms including the new FRK models.

Benefits

The new platform has various benefits, and it is the right choice to accommodate the changing environment and comply with the new regulations. Also, it provides a compatible replacement for many of the older models still in the field utilizing R134a.

The new FRK models offer an extended operating envelope both for negative and positive temperature applications. They are suitable for operating both in 50Hz and 60Hz, lowering the number of SKU's to be managed, while offering a higher efficiency level.

Phase-Out Date and Samples of New Models

The F-Series platform will be discontinued by September 30, 2025 and will remain available for orders until March 31, 2025, while the T-Series platform will be discontinued by December 31, 2025 and will remain available for orders until June 30, 2025. After these dates, Secop cannot guarantee the fulfillment of orders.

The FRK 50-60Hz range will be available for sampling starting from September 2024.

Due to the current range extension, not all the current models will have a suitable replacement.

Further Info

For a complete assessment of your needs, we kindly ask you to get in touch with your sales or technical support representative at Secop who are available to assist you during the transition phase.
