

CHAPTER 8 ■ SHUT-OFF VALVES IN SERIES 3064, 3064N, AND 3064E

APPLICATIONS

Please remember that the operation of pressure equipment and pressure assemblies is not covered by Directive 2014/68/EC ; rather, it is regulated by the national legislation of the Member States of the European Union. Therefore, the various Member States have issued laws that call for periodic inspection of pressure equipment and pressure assemblies. Italy issued Ministerial Decree 329 dated 01/12/2004 regarding the provisions for the installation and use of pressure equipment and pressure assemblies that comply with Directive 97/23/EC.

Any intervention for periodic inspection or replacement of an installed safety device becomes very difficult if the protected vessel is not equipped with a shut-off valve.

Shut-off valves in series 3064, 3064N and 3064E installed between the protected vessel and the safety valve, allow the device to be disassembled for inspection or replacement without blowing off all the refrigerant fluid from an entire section of the system.

The valves in this chapter can be used with the same fluids foreseen for safety valves series 3030, 3060, 3061 and 3065, specifically:

- a. Valves in series 3064 can be used with the following refrigerant fluids:
 - HCFC (R22)
 - HFC (R134a, R32, R404A, R407C, R410A or R507)
 - HFO and HFO/HFC mixtures (R1234yf, R1234ze, R448A, R449A, R450A or R452A)
- b. Valves in series 3064N can be used with the following refrigerant fluids:
 - HFC (R134a, R32, R404A, R407C, R410A or R507)
 - HFO and HFO/HFC mixtures (R1234yf, R1234ze, R448A, R449A, R450A or R452A)
 - HC (R290, R600, R600a)

CAUTION! Valves in series 3064N cannot be installed on systems that use HCFC (R22) refrigerants or other refrigerants blended with mineral oils or alkylbenzenes.
- c. Valves in series 3064E can be used only with refrigerant fluid R744.

CONSTRUCTION

Valves in series 3064, 3064N and 3064E are supplied by Castel in the open position and the spindle cap protection is sealed with a Castel lead seal. Any operation to close the valve requires causes the tampering with the seal and must be performed exclusively by:

- staff authorized to work on the system
 - an operator of a competent inspection body
- These persons will be responsible for the subsequent re-opening of the valve and the application of a new cap seal with their own lead seal.
- The main parts of the valves in series 3064, 3064N, and 3064E are made from the following materials:
- Hot forged brass EN 12420 – CW 617N for the body
 - Hot forged brass EN 12420 – CW 617N, chromium plated, for the ball
 - Steel, with proper surface protection, for the spindle.
 - P.T.F.E. for the ball seat gaskets
 - Chloroprene rubber (CR) for outlet seal gaskets in valves series 3064
 - Hydrogenated nitrile butadiene rubber (HNBR) for outlet seal gaskets in valves series 3064N
 - Ethylene propylene diene monomer rubber (EPDM) for outlet seal gaskets in valves series 3064E
 - Hot forged brass EN 12420 – CW 617N for the protective cap of the spindle
